

Web Programming Final Project

- Faculty of computer science
- Prepared by :
Eng Abdallah Moataz

Final Project Requirements

- Final Project Requirements
- Create a full-stack web application using:
- HTML, CSS, JavaScript, Flask, and MySQL.
- The application can be a clothing brand, student system, library system, clinic system, or any similar idea.
- 1. At least 4 pages
- 2. At least 2 forms
- 3. The main project data must be saved permanently in MySQL database
- 4. The data must be retrieved from MySQL and displayed on the web application
- 5. Data must not be hardcoded in HTML
- 6. The user/admin must be able to Add / View / Update / Delete records
- 7. Add / Update / Delete operations must affect the MySQL database directly
- 8. Use external CSS file
- 9. Use JavaScript validation or interaction
- 10. Flask routes must handle all requests
- 11. MySQL tables must be created by the student
- 12. You must be able to explain every part of the project during discussion
- The design alone is not enough; the project must include real Flask routes and real MySQL database operations.
